

Hydraulic roadblock machine

Hydraulic roadblock machine belongs to the equipment that is controlling the pass of vehicle. It can use with the barrier gate control system, and also use alone. It can mainly used at special place 'vehicle access controlling. Such as Customs. Frontier inspects. Logistics. Harbors and docks. Prison. National treasury. Nuclear power station. Military base. Government vital department. Airport. For the purpose of preventing the vehicle from strongly rushing out gate.

Main Technical parameters:

- 1) Passing capability: HYTL20.HYTL25.HYTL30. HYT35 type can allow ton container trucks passing.
- 2) LD750 type can allow 60 ton vehicle passing.
- 3) Power supply: 1.5KW/380V
- 4) Dropping-time: $\leq 3S$
- 5) Lifting-time: $\leq 4S$ LD750 about 5s
- 6) Operating environment temperature: $-25^{\circ}C \sim 65^{\circ}C$
- 7) Storage environment: $-10 \sim 75$, rainproof moisture-proof dustproof
- 8) Standard: as the above table or according to the needs of customer.
- 9) Material: mild-steel. Spray anti-rust paint
- 10) Weight: 0.75~1.0 ton
